

HOUSING FINANCE FORUM: Expanding Access to Affordable and
Uganda, July 11-12, 2018 Adequate Housing in
Sub-Saharan Africa

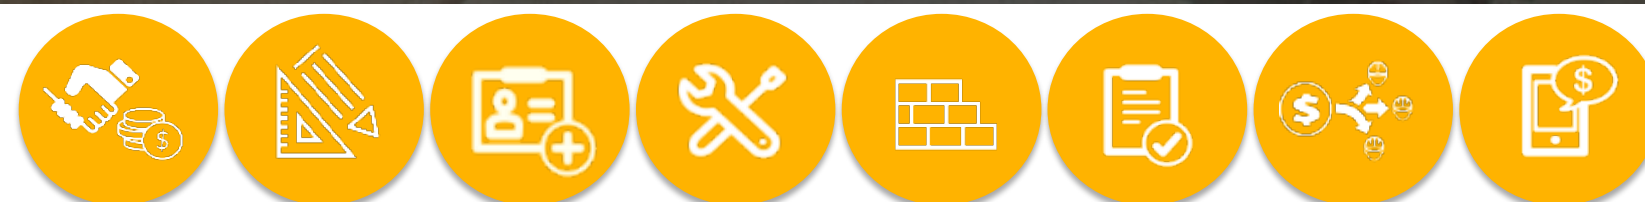

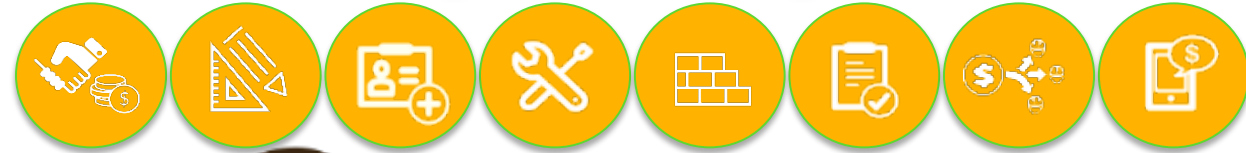

What is **iBuild**™ Global?

The iBUILD mobile application for customers is a citizen-to-citizen (C2C) housing market disruption tool that empowers people to build, reversing their housing plight through small-scale construction based on individual need

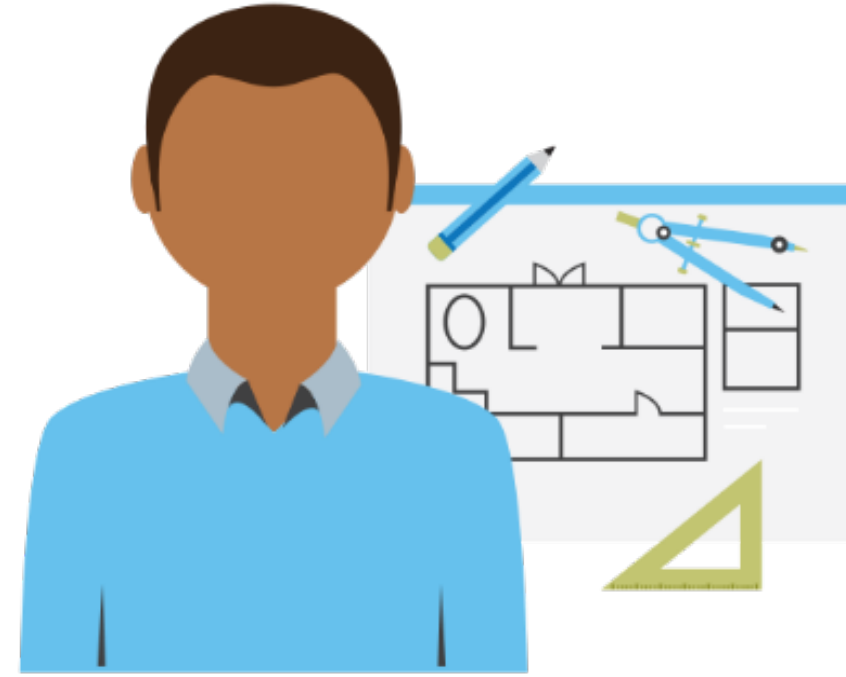

Let's Check it Out

What pain points are being addressed?

Families find it difficult to navigate the construction process and have no means to verify quality

Architects are often disregarded, resulting in poor quality buildings that may lead to collapses

Suppliers don't have the digital tools to market and manage accounts for the bottom of the pyramid

Lenders often don't trust that the homes will actually be built because there is no transparency

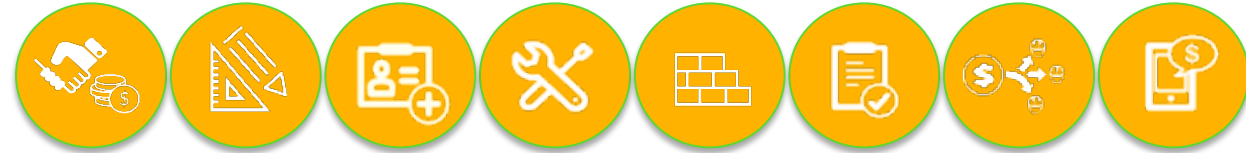

Contractors find it difficult to identify, manage & pay skilled workers

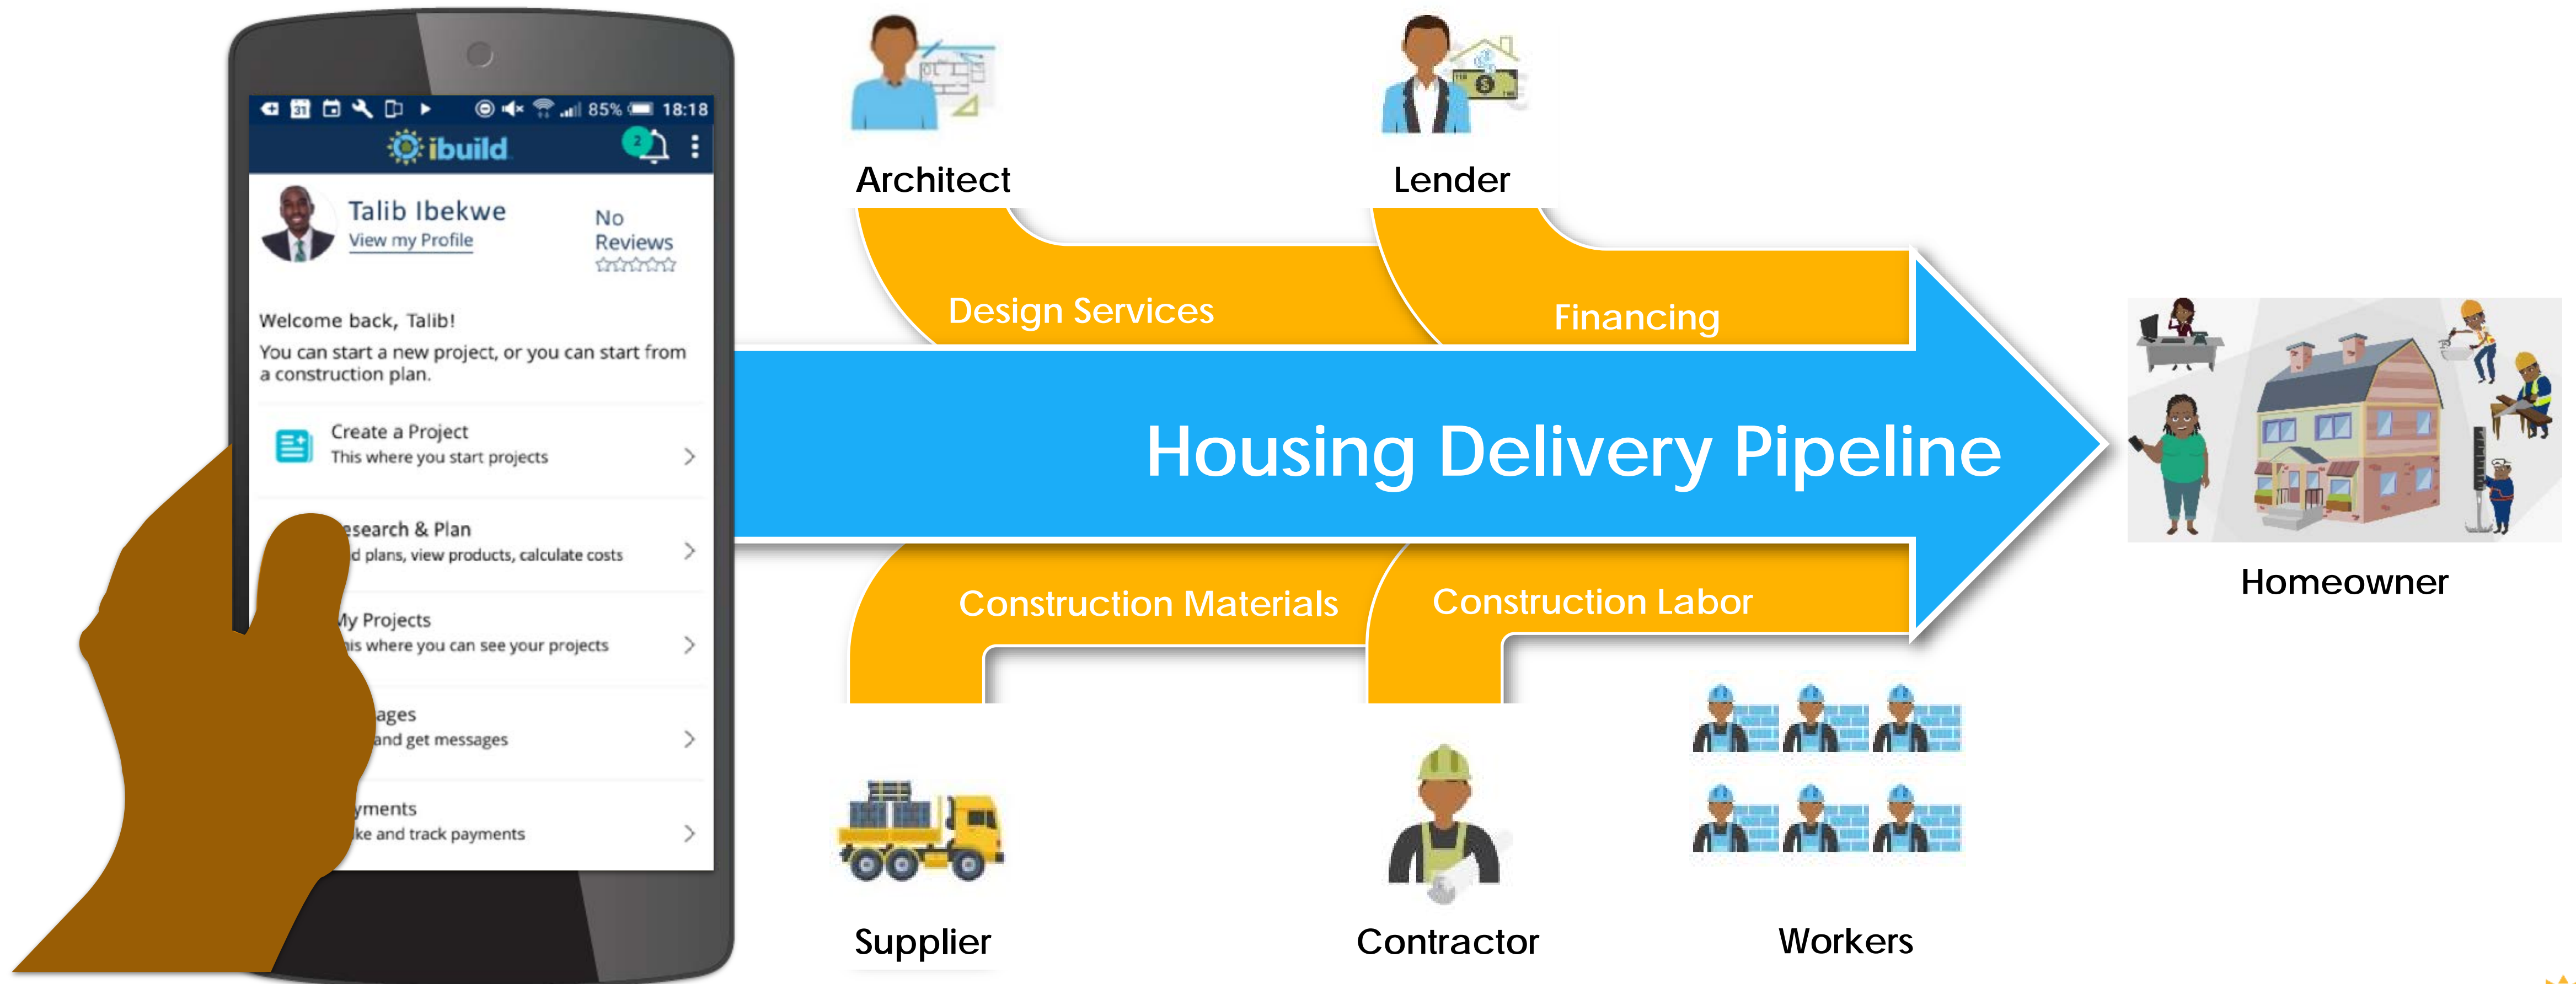

Informal construction workers lack a clear pathway to grow in their trade

How do we leverage technology to solve the problems?

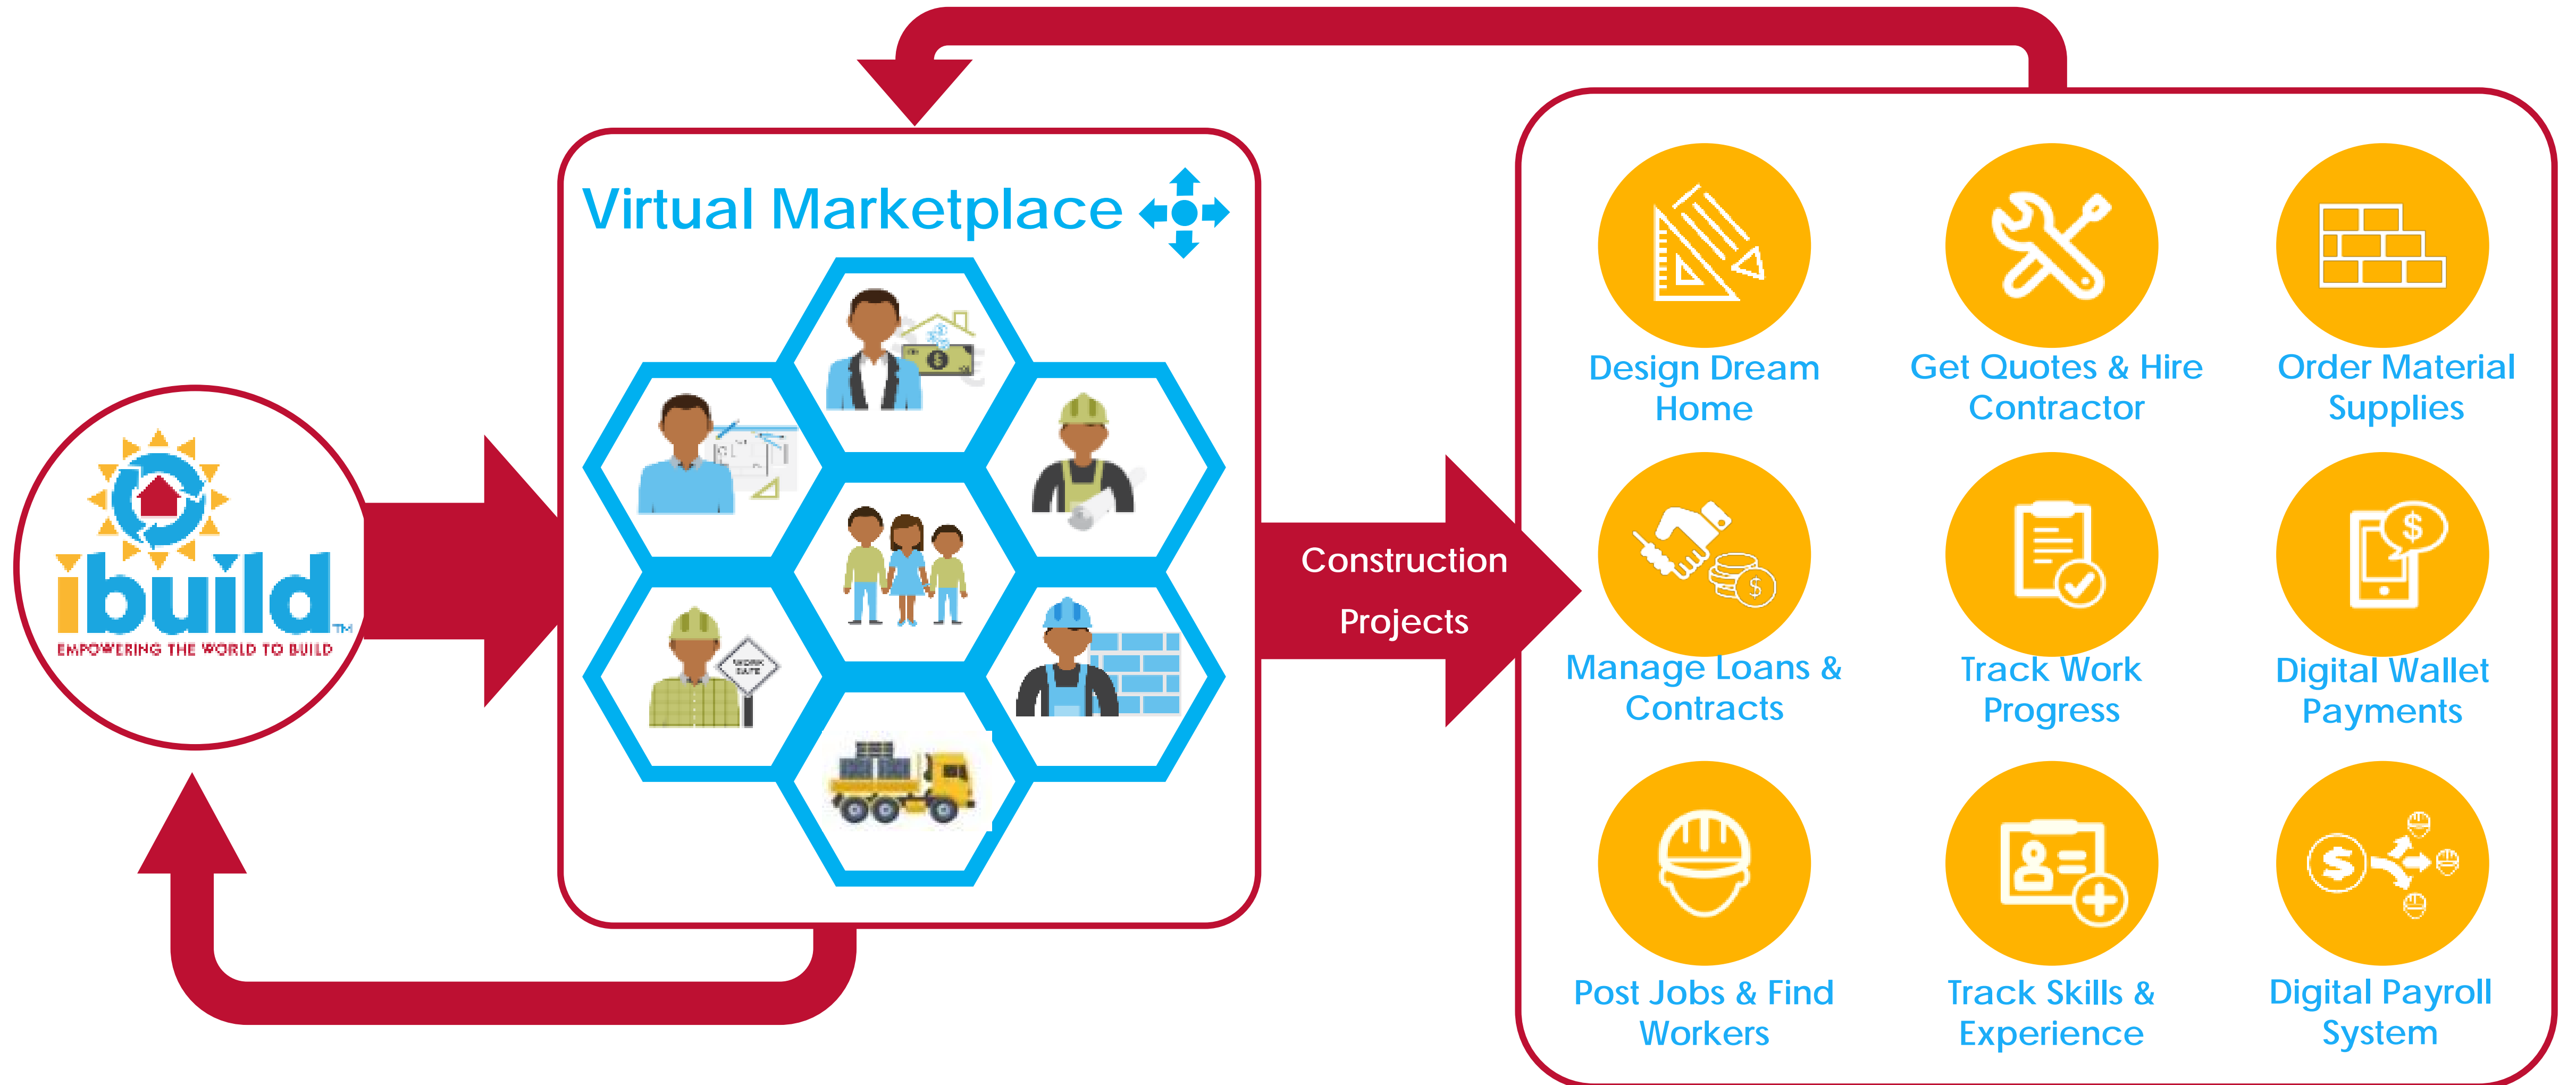

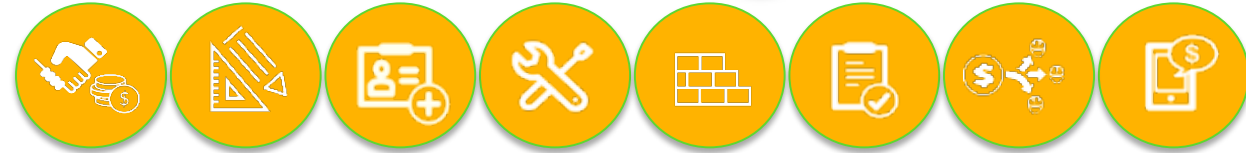

We create an ecosystem on a trusted digital platform that allows all stakeholders to interact throughout the housing construction process.

Our Goal: To provide digital tools and enable payments in a shared ecosystem

iBUILD High Level Features

Thank You

Together, we will empower the world to build.
